

22 System — Introduction

22 System is a suite of flush-mounted electrical and data devices that integrate seamlessly with any architectural finish. Installed with rigid surface materials, mudded into drywall, or cast in concrete, 22 System is a minimal and flexible alternative to traditional systems, designed by Bocchi.

DEVICES

The 22 offers a range of devices: from tamper resistant outlets to data and communication components, as well as single pole and momentary switches for home automation systems.

MOUNTING PLATES

Drywall/Plaster

Designed for drywall/plasterboard only applications, these mounting plates mud-in directly over drywall/plasterboard with a skim coat of plaster feathered outwards from the mounting plate. Available in single, linear and diagonal configurations.

Multi-Material

Designed to be used with rigid surfaces such as millwork, stone, glass, tile, metal, etc. and will accommodate a range of finish material thicknesses. Refer to our "[Device Depth Selection Guide](#)" to specify the appropriate device depth for your installation. Available in single, linear and diagonal configurations.

Concrete

Designed for concrete applications. The mounting plate is attached to the building's formwork before the concrete is poured. Available in single, linear and diagonal configurations.

COLOURS

To integrate with a variety of finishes, the 22 System devices are available in ten colours:

White
RAL 9016
