

BABY CHANGING STATIONS

HIGHEST LEVEL OF SECURITY

In all publicly buildings where visitors also include parents with young children, there is a need for safe environments where infants can be changed in a secure and hygienic way.

A changing table should do more than just provide a surface for diaper changes. It must be safe, practical, and easy to use — without hassle for parents.

With many years of experience in developing functional and durable solutions, we know what it takes.

Our changing tables combine durability, safety, and user-friendliness with a sleek and contemporary design, making them a popular choice for public and commercial changing areas.

You will find our changing tables in airports, shopping centers, holiday resorts, campsites, hotels, restaurants, amusement parks, cultural and sports centers, as well as on trains and at train stations across Europe.

Hygiene solutions
designed for the moment.
Engineered for years of use
