

Single-Pole

Single-Pole

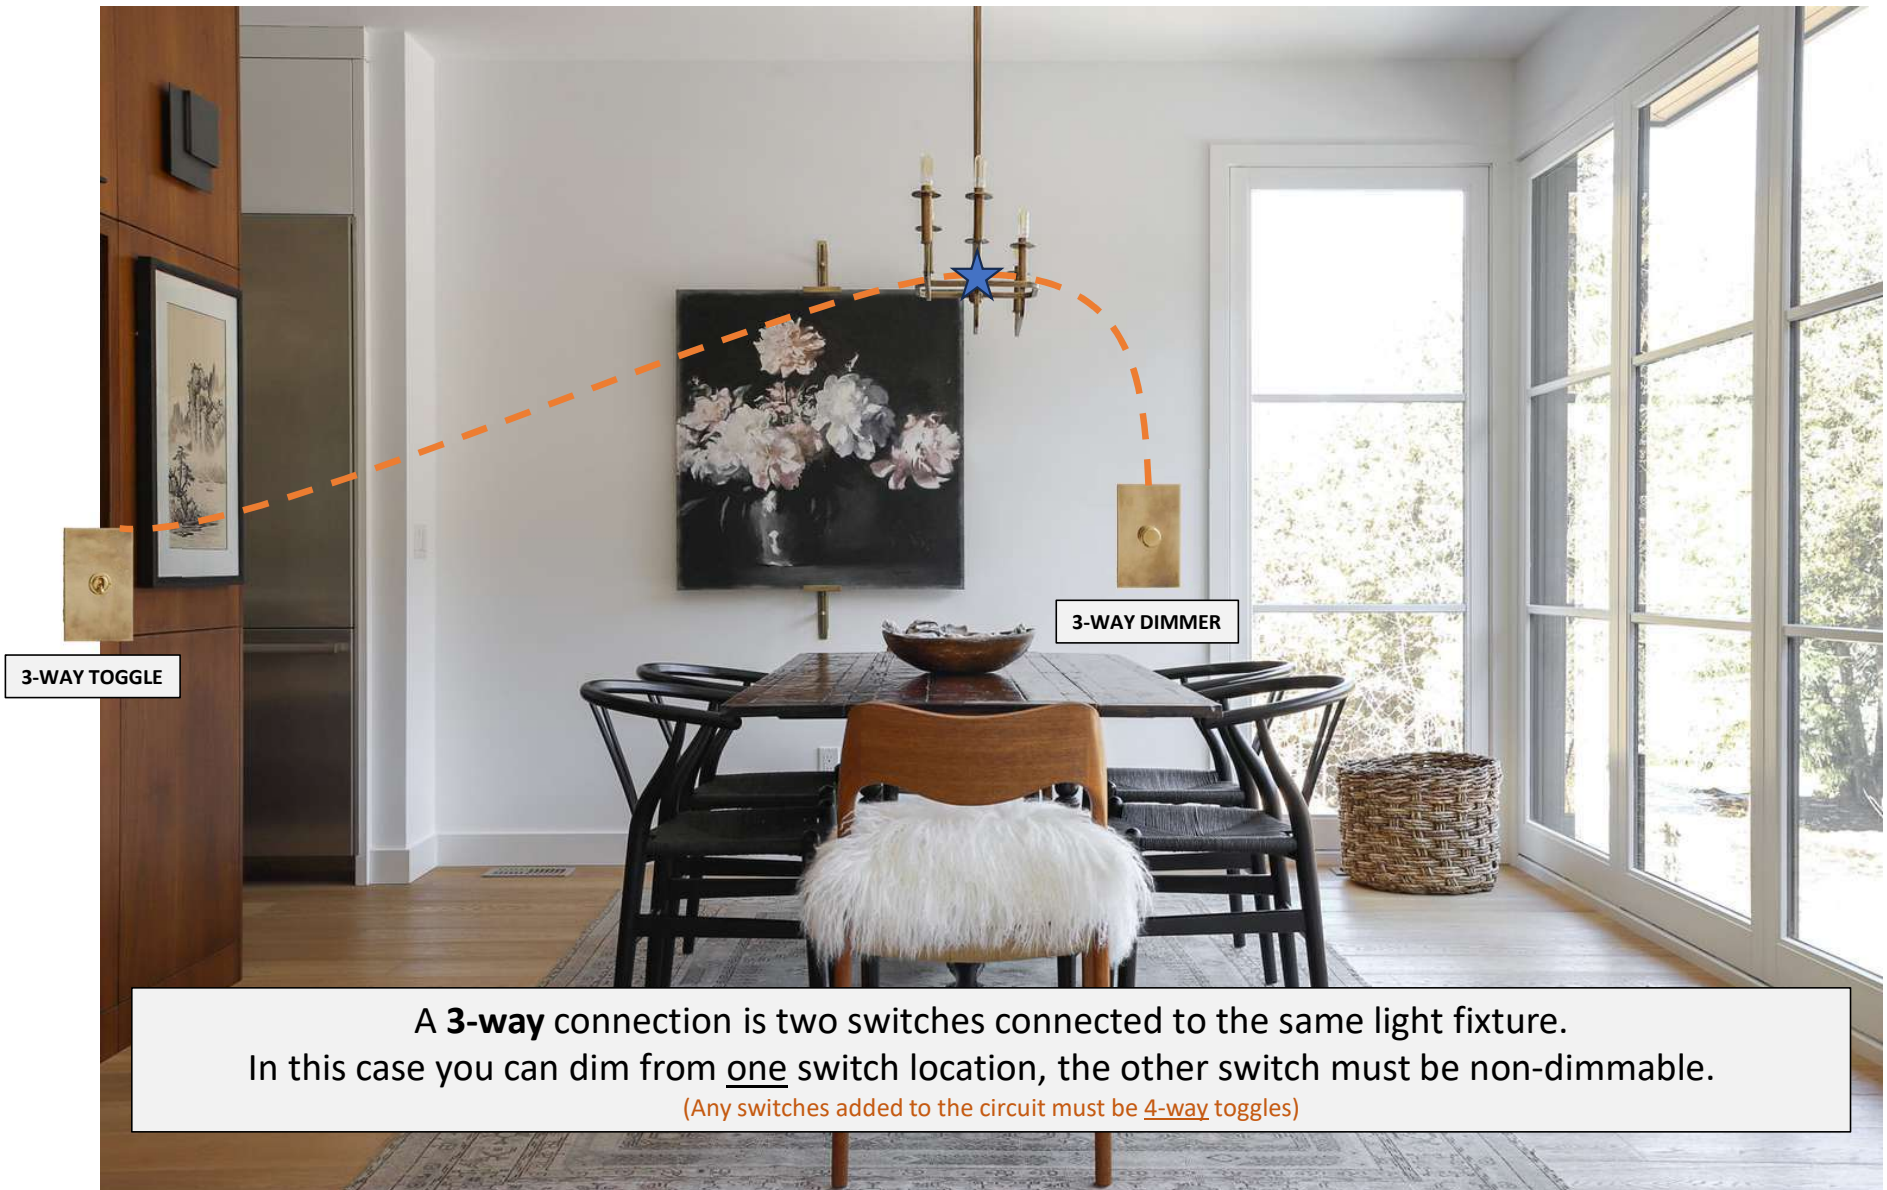

Single-Pole

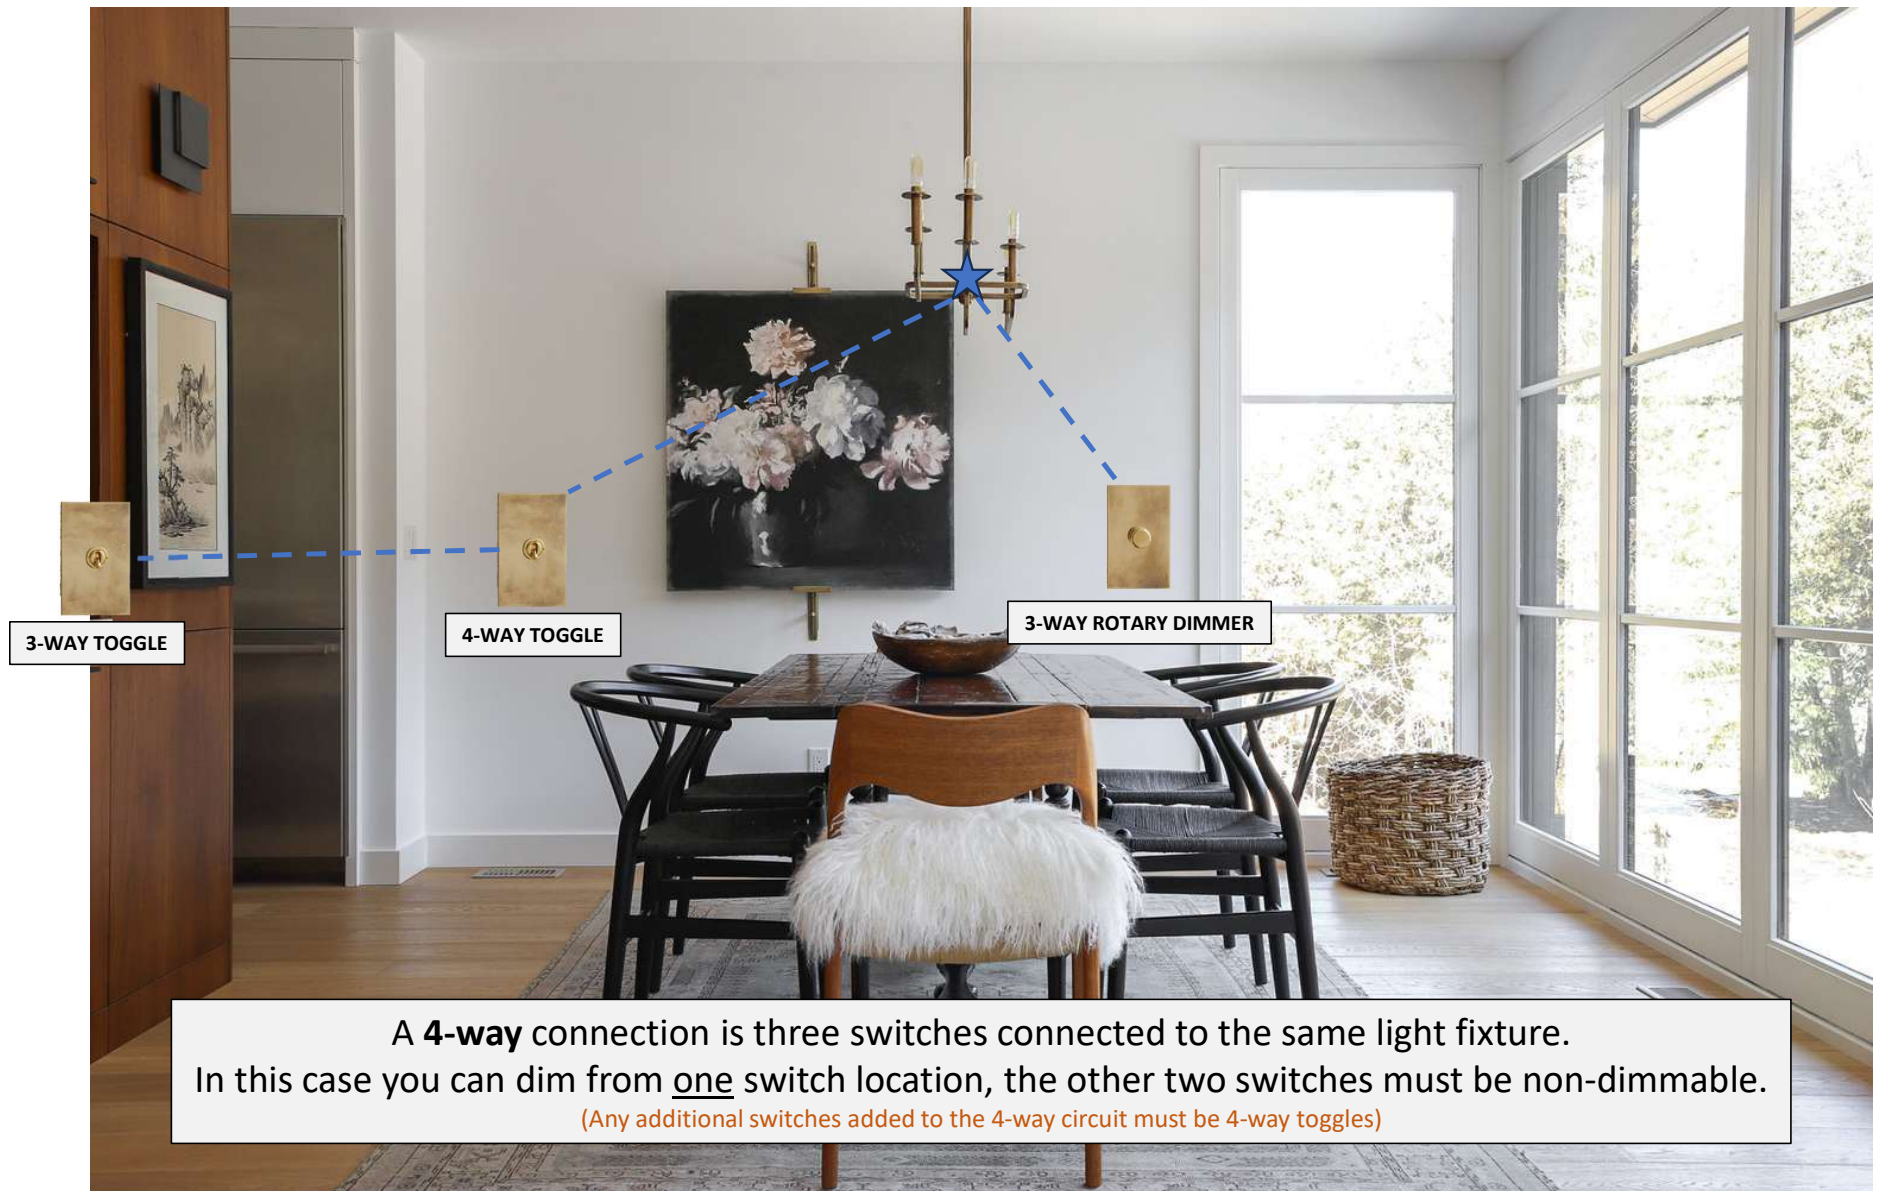

A Single-Pole connection is one switch connected to the light fixture.

Specify either a Toggle Switch, Rotary Dimmer, or Rotary Push On/Off to control the light.

Please Note: Our switches come as 3-way by default, they can be wired as single-pole (or 3-way) onsite.

A **4-way** connection is three switches connected to the same light fixture. In this case you can dim from one switch location, the other two switches must be non-dimmable.
(Any additional switches added to the 4-way circuit must be 4-way toggles)
